

Check and Cash Deposit ATM Software

EZ-ACT is a universal solution that simplifies the process of handling checks deposited into an imaging ATM. EZ-ACT allows Financial Institutions, regardless of size, the opportunity to avoid manually retrieving checks and avoid the investment of a custom integration that is standard today. It is simple, economical and cost effective.

EZ-ACT consists of three components, the EZ-ACT ATM Software, the EZ-ACT Manager (Server) Software and the EZ-ACT Workstation Software. In many cases the EZ-ACT Manager and EZ-ACT Workstation Software can be deployed on the same PC, saving the branch the cost of purchasing additional hardware (see the minimum system requirements on the back of this flyer).

US PATENT PENDING

www.ezact.com

- EZ-ACT is a universal solution to simplify the process of handling checks deposited in an Automated Deposit ATM.
- EZ-ACT uses the Financial Institutions existing check scanning software and hardware.
- EZ-ACT works with most scanners including Canon, Panini, and Unisys.
 - EZ-ACT allows the branch staff to control
- how often ATM check deposits are transferred for processing.

EZ-ACT ATM Software, resides on each ATM, gathers image files of the front and back of checks, packages this information securely for transmittal to the EZ-ACT Manager Software.

EZ-ACT Manager (Server) Software, resides on the Financial Institutions (FI) existing hardware. It automatically pulls images and account data from the ATM, generates an edit list for any transaction that needs review by the branch and creates virtual deposit slips.

EZ-ACT Workstation Software, located on FI existing check process workstation, allows the FI staff to adjust ATM transactions as needed and integrates seamlessly with their check scanning software.

- Support Clearing House Mode
- Able to Split on us and off us transactions

Check Processing Capabilities

- Transaction Verification
- Automatic electronic check endorsement

Data Archival

 Auto archiving based on business rules

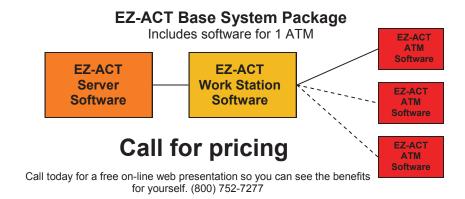

Flexible Workload Processing

- Single workstation processing multiple ATM's
- Multiple workstations processing multiple ATM's

EZ-ACT allows the Financial Institution (FI) to process deposits from an Automated Deposit ATM just as if the account holder had given the checks to a teller. The FI saves time and resources, provides a new service to their account holders and it is cost effective. EZ-ACT can process checks and provide cash reports from one or multiple locations, on or off site. It will batch process the deposits to a central location or to multiple EZ-ACT enabled workstations. The branch staff does not need to retrieve checks from remote locations on a daily basis. All check images, account data and account holder information is encrypted from the moment it is detected by EZ-ACT ATM Software through the deposit process.

FI Minimum System Requirements

- Automated Deposit ATM (Check Deposit Module required)
 .NET 3.5 SP1, Minimum 1Gb RAM
- Server PC running Windows server 2003-08, Windows XP
 Pro, Windows Vista Business or Windows 7 Pro. .NET 3.5
 SP1, 2Gb RAM, 80M available hard drive space. (The server software can be installed on the Workstation PC providing the minimum server requirements also apply to the workstation PC)
- Workstation PC (where the current check scanner software and scanner is installed), Windows XP, Vista or Windows 7, .NET3.5 SP1, 2Gb RAM, 60M available hard drive space.
 Cannon, Panini, Digital Check, or Unisys check scanner.
